  - [[e]]f. providing function for the editing of said screen shots into common formats that can produce presentations.
2. (Original) The method of capturing Internet Web screens of claim 1, wherein said browser plugin program can be written for any standard browsers.
3. (Currently amended) The method of capturing Internet Web screens of claim [[2]]<sub>1</sub>, wherein said browser plugin program creates a graphical user interface window from which all functions are executed.
4. (Currently amended) The method of capturing Internet Web screens of claim [[3]]<sub>1</sub>, wherein said plugin program creates a screen shot of each said universal resource locator addresses using said graphical user interface to present to a user.

5. (Currently amended) The method of capturing Internet Web screens of claim ~~[[4]]1~~, wherein ~~said plugin program provides function to search for saved said~~ the data associated with the screen shots comprises universal resource locator address and text contained within said screen shots.

6. (Currently amended) The method of capturing Internet Web screens of claim ~~[[5]]1~~, wherein said plugin program provides function to relocate said screen shots into a difference sequence for developing a presentation.

7. (Currently amended) The method of capturing Internet Web screens of claim ~~[[6]]1~~, wherein function is provided to edit text within~~[[g]]~~ each said screen shot.

8. (Currently amended) The method of capturing Internet Web screens of claim ~~[[7]]1~~, wherein function is provided to edit all graphics within each said screen shot.

9. (Original) The method of capturing Internet Web screens of claim 1, wherein hyperlinks are preserved in each said screen shot to allow them to work as originally created.

10. (Original) The method of capturing Internet Web screens of claim 1, wherein a new hyperlink is created and placed at the bottom of each said screen shot to enable a user to click on it and be able to return to a calling screen.

11. (Original) The method of capturing Internet Web screens of claim 1, wherein said screen shots can be edited and placed into separate files for development of a presentation.

12. (Original) The method of capturing Internet Web screens of claim 11, wherein said files can be saved and provide an archive of an Internet Web session.

13. (Currently amended) The method of capturing Internet Web screens of claim [[11]]1, wherein said presentation can be shown as a set of slides by using a slide show function provided in said plugin program.

14. (Original) The method of capturing Internet Web screens of claim 1, wherein said screen shot file can be saved and shared on a network for common access to said screen shots.

15. (Original) The method of capturing Internet Web screens of claim 1, wherein hyperlinks contained in said screen shots are saved.

16. (Original) The method of capturing Internet Web screens of claim 1, wherein a new hyperlink to link back to said Internet Web screen that it was called from is created.

17. (Currently amended) A system of capturing Internet Web screens, comprising [[of]]:

- a. a means to provide a browser plugin program with a graphical user interface;
- b. a means to use a standard browsers history of universal resource locator addresses as source of the browser plugin program;
- c. a means to create a screen shots from the standard browsers history of the most recently viewed Internet Web screens;
- d. a means to enable searching of data associated with the screen shots;
- e. a means to enable [[and]] viewing of the screen shots within a screen shot file; and [[e]]f. a means to provide function for the editing of said screen shots into common formats that can produce presentations.

18. (Original) The system of capturing Internet Web screens of claim 17, wherein said browser plugin program can be written for any standard browsers.

19. (Currently amended) The system of capturing Internet Web screens of claim [[18]]17, wherein said browser plugin program creates a graphical user interface window from which all function are executed.

20. (Currently amended) The system of capturing Internet Web screens of claim [[19]]17, wherein said plugin program creates a screen shot of each said universal resource locator addresses using said graphical user interface to present to a user.

21. (Currently amended) The system of capturing Internet Web screens of claim 20, wherein ~~said plugin program provides function to search for saved said~~ the data associated with the screen shots comprises universal resource locator address and text contained within said screen shots.

22. (Currently amended) The system of capturing Internet Web screens of claim [[21]]17, wherein said plugin program provides function to relocate said screen shots into a difference sequence for developing a presentation.

23. (Currently amended) The system of capturing Internet Web screens of claim [[22]]17, wherein function is provided to edit text within[[g]] each said screen shot.

24. (Currently amended) The system of capturing Internet Web screens of claim [[23]]17, wherein function is provided to edit all graphics within each said screen shot.

25. (Original) The system of capturing Internet Web screens of claim 17, wherein hyperlinks are preserved in each said screen shot to allow them to work as originally created.

26. (Original) The system of capturing Internet Web screens of claim 17, wherein a new hyperlink is created and placed at the bottom of each said screen shot to enable the user to click on it and be able to return to the calling screen.

27. (Original) The system of capturing Internet Web screens of claim 17, wherein said screen shots can be edited and placed into separate files for development of a presentation.

28. (Original) The system of capturing Internet Web screens of claim 27, wherein said files can be saved and provide an archive of an Internet Web session.

29. (Currently amended) The system of capturing Internet Web screens of claim ~~[[27]]~~17, wherein said presentation can be shown as a set of slides by using a slide show function provided in said plugin program.

30. (Original) The system of capturing Internet Web screens of claim 17, wherein said screen shot file can be saved and shared on a network for common access to said screen shots.

31. (Original) The system of capturing Internet Web screens of claim 17, wherein a means where hyperlinks contained in said screen shots are saved.

32. (Original) The system of capturing Internet Web screens of claim 17, wherein a means where a new hyperlink to link back to said Internet Web screen that it was called from is created.
